

DAVID AI - MASTER PROMPT (Starter)

This document is a starter specification for David AI.

Core Requirements:

- Build a complete AI operating system, not mockups.
- Preserve and improve the existing backend architecture.
- Connect the frontend to David AI Backend v0.3.3 as the primary backend.
- Use backend fallback/mock mode if external AI providers are unavailable.
- Futuristic premium interface with a red AI sphere/core that reacts to listening, thinking, speaking, processing, success, warning, and error states.
- Voice-first interaction with interruption (barge-in): when the owner speaks, stop text-to-speech immediately and begin listening.
- English and Yoruba support with automatic language detection.
- Persistent memory, tasks, projects, devices, activity, settings, and security.
- AI provider abstraction supporting multiple providers.
- Website generation and deployment workflow.
- AI-assisted video generation workflow.
- Owner approval required for new user registrations.

Owner Configuration:

Display Name: My Lord

Owner ID: SEBIOMO231

Email: sebiomo231@gmail.com

Authentication:

- Password (set securely during installation)
- Fingerprint/biometric where supported

Note:

This is a starter document. The complete master prompt containing every requirement discussed over the past several days will be substantially larger.
